

JOB DESCRIPTION

Systems Test Engineer Develop test plans, test cases, and gather requirements

ACCOMPLISHMENTS

1. Julia was assigned to the Systems Testing Services Team for some time over the period spanning from 2007- 2008. During her time in our team she demonstrated her ability to review requirements and technical documentation and write test plans and test cases for SAP and .NET systems. Julia is also adept at interviewing business professionals and writing requirements.
2. Julia also took it upon herself to research new methodologies and the impact it could have within the group. She was able to gain consensus with members of other teams on the new methodologies and implement them on gathering requirements for highly technical .NET solutions.
3. Julia was Responsible for testing several critical applications such as SAP Security, Combined Fund Drive, and conducted the accessibility testing using JAWS.

EVALUATION

STRENGTHS

Great Place to Work: Julia always strives to build consensus and regularly encourages and recognizes others. She provides open feedback and is always an active contributor within the team. Julia is not afraid to take the lead. She often does so without any prompting. She fosters respect and trust with her engaging and easy-going disposition.

Risk Taking: Julia readily strove to open communications amongst team members, working through issues and challenges in an open, fear-free manner. When a team member suggested a New approach to the systems testing to add robustness to the activity, Julia immediately embraced the concept and led the team discussions to adopt the suggestion despite the team's initial resistance.
